

340B Compliance Monitoring Dashboard

Welcome to the [340B Compliance Monitoring Dashboard](#) . This platform provides a comprehensive and dynamic view of our program's health, designed to empower data-driven decisions.

This dashboard suite allows you to:

- Monitor Overall Compliance:** The Executive Summary provides a high-level overview of key metrics like total prescriptions and the overall compliance rate, helping you quickly assess program status.
- Analyze Financial Impact:** The Financial Deep Dive dashboard focuses on the monetary value of compliance, allowing you to identify the most significant financial risks from non-compliant prescriptions.
- Evaluate Provider Performance:** The Provider-Specific dashboard enables a deep dive into individual provider data, including their compliance trends and specific non-compliant prescriptions.
- Track Trends & Forecast:** The Trend and Forecasting dashboard visualizes key metrics over time, helping you identify patterns and anticipate future

Executive Summary

The 340B Program's overall performance for the current period is trending towards 29.82% . While the majority of prescriptions are non-compliant, our analysis shows a consistent pattern of non-compliance driven by a few key factors. The following insights provide a deeper look into these areas, highlighting both risks and opportunities for improvement.

Key Findings & Primary Drivers

- Our detailed analysis confirms that non-compliance is not a widespread issue but rather is concentrated in a few specific areas.
- The single largest driver of non-compliant prescriptions is **[Duplicate Discount]**, which accounts for **[28.33%]** of all non-compliant scripts.
- A secondary contributor, **[Inactive Provider]** , also requires attention due to its consistent volume.
- Your Trend and Forecasting dashboard shows that our **Compliance Rate %** has **decreased from the** the last **[1]** months, indicating a **Negative]** trend in our compliance efforts.

Financial Impact & Risk

The financial dashboard reveals a significant monetary impact from non-compliance. The total cost of non-compliant prescriptions for this period is 2M . This cost is not evenly distributed; it is heavily influenced by the same top non-compliance reasons identified above. Specifically, **[Duplicate Discount]** alone is responsible for **28.77% (\$678k)** of our total non-compliant costs, highlighting a major area of financial risk.

Actionable Recommendations

- Based on these findings, we recommend the following actions to improve compliance and mitigate financial risk:
- Targeted Training:** Develop and implement a specific training module to address the **[Duplicate Discount]**, issue. This focused effort will likely yield the highest return on investment.
 - Operational Review:** Conduct a review of the dispensing process for prescriptions flagged for this reason to identify and correct any systemic issues.
 - Ongoing Monitoring:** Use the dashboard's provider-specific and trend pages to continuously monitor the impact of these changes and ensure improvements are sustained.
